

JayPets Teach and Treat Remote (Version 1)

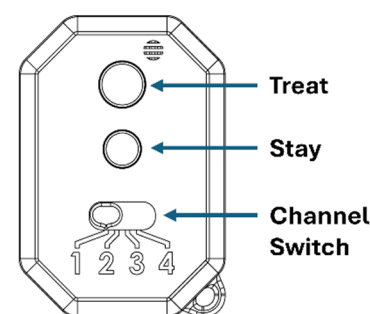

Package contents:

- 1 x JayPets Teach and Treat Remote (hereinafter referred to as the Controller)
- 1 x CR2032 battery (inserted in control box)
- 1 x this manual

Device description

Treat button	By pressing this button the Controller will send a command to issue one reward.
Stay button	By pressing this button, the Controller sends a command to enter the "Down/Stay" mode according to the settings on the control panel of your Teach and Treat (Fig. 3).
Channel Switch	A slide switch for selecting communication channels "1-2-3-4".

Fig. 1

Pairing with Teach and Treat reward trainer

Fig. 2

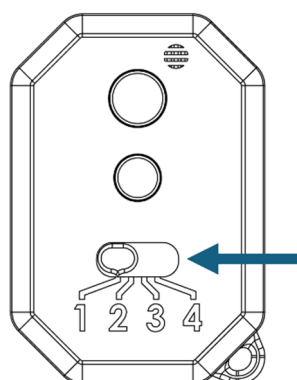

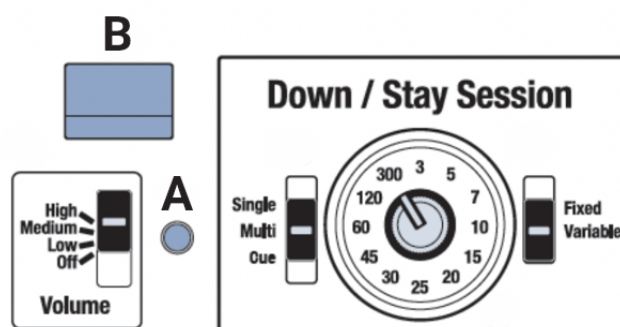

Fig. 3

- On the Teach and Treat channel selection slide switch "1-2-3-4" (Fig. 2), select the desired channel.
- On the control panel of your Teach and Treat (Fig. 3), **press and hold the pairing button (A)** until the indicator light **(B)** flashes on this panel.
- **Press the Treat button** on the Controller. The Controller sends an instruction to issue the reward. Upon receipt, your Teach and Treat will complete the pairing process with your Controller and its indicator light will stop flashing.
- Every time you press the button on your Controller again, the corresponding instruction is sent to your Teach and Treat (see [Device Description](#))

ATTENTION: Once you have successfully paired your Controller with Teach and Treat, do not change the channel selection slide switch settings on your Controller. If this happens, your Teach and Treat will not respond to your Controller. To restore functionality, re-set the channel on your Controller that you used during the pairing process with your Teach and Treat. By setting the original communication channel on the Controller, it is no longer necessary to repeat the pairing process again.

NOTE: To change the channel, you must set a new channel on the channel selection slide switch and repeat the pairing process with your Teach and Treat as described in this chapter.

NOTE 2: If you use the **AgiPad 2 Teach and Treat** training pad at the same time, you don't have to go through the pairing process again. Just set the same channel on the channel selection slide switch on your AgiPad 2 and your Controller.

What to watch out for:

- JayPets Teach and Treat Remote is not waterproof. Protect from rain and other weather conditions.

Replacing batteries

- Using a screwdriver, unscrew the outer screws of the plastic box of the Controller.
- Remove the bottom plastic part of the Controller box. This will expose the battery compartment of the Controller.
- Push the old CR2032 battery out of the Controller battery holder with a thin, sturdy object.
- Insert the new CR2032 battery into the battery holder. Ensure the correct battery polarity! (Fig. 4)
- Cover the battery compartment of the Controller with the bottom plastic part of the box and secure it by screwing it back in.
